TITLE: Using the Power-House Extraction-Steam Heat for Household Refrigeration
and Air Conditioning (Ispol'zovaniye otnornogo tepla TETs dlya bytovogo
khladosnabzheniya i konditsionirovaniya vozdukh)

PERIODICAL: V sb.: Kompleksnoye energosnabzheniye gorodov. Minsk,
1957, pp 149-158

ABSTRACT: Development of city central heating presents problems of refrigeration
and air conditioning based on the heat of water, which could result in fuel
savings. Estimates performed for the medium zone of the USSR show that in
the near future, the heat load for air conditioning can amount to 30-40% of the
building-heating load. Data on heat consumption per unit of refrigeration for
various outfits and heat sources is presented. Lithium-bromide absorption
outfits, with direct absorption of air moisture by the solution, yield, with equal

Card 1/2

Using the Power-House Extraction-Steam Heat for Household Refrigeration

fuel consumption, 30% more refrigeration than ammonia absorption outfits, twice as much as compressor-type outfits, three times as much as freon steam-ejector outfits, and six times as much as water steam-ejector outfits. Their energy efficiency increases considerably if the industrial waste heat is used or when condenser-cooling water is used for hot-water supply. A basic diagram is presented of an absorption vacuum-water bromide- and lithium-chloride outfit for air conditioning. The coolant temperature involved is 60-95°C, the heat-utilization factor is 70-75%. Experimental models of such an outfit can be rationally constructed at power stations. Low-potential heat from power plants can also be used for refrigeration in household absorption-type refrigerators operating with lithium-bromide solution. A scheme of household refrigerator is presented which is more economical than compression types and much more economical than electrically-heated absorption outfits. Lithium-bromide and lithium-chloride outfits can be used also for utilizing waste heat by means of thermal pumps. Bibliography: 5 items.

TITLE: Session on heat exchange during change of aggregate state of matter.
(Sessiya po teploobmenu pri izmenenii agregatnogo sostoyaniya veshchestva.)

PERIODICAL: Teploenergetika, 1958, No.3. pp. 91-93 (USSR)

ABSTRACT: The Commission on High Steam Conditions of the Power Institute of the Acad.Sci. of thw U.S.S.R. and the Institute of Thermal Engineering of the Acad.Sci. of the Ukrainian SSR, held a scientific and technical session in Kiev on September 23-28, 1957 on questions of heat exchange during change of aggregate state of matter. The session was attended by scientific workers of academic and research institutes and colleges, and workers in design institutes and industry. Forty reports were read in the plenary and sectional sessions. The main tasks of the session were to consider the research work that had been carried out, to co-ordinate research work and to determine the most promising lines for investigation into heat exchange during change of aggregate state of matter. In his report 'Some problems of the theory of heat exchange during large volume boiling in tubes' corresponding member of the Acad.Sci. Ukrainian SSR, V.I. Tolubinskiy, critically examined the best known criterial equations for boiling liquid. Dr.Tech.Sci. S.S. Kubatladze, of the Central Boiler Turbine Institute made a report about 'Some problems of the theory of crises in the mechanism of boiling' which

Card 1/7

Session on heat exchange during change of aggregate state of matter. 06-3-23/26

systematised the results of investigations on critical densities of heat flow during boiling in large volume tubes. Dr.Phys.Math.Sci. A.A. Gukhman of the Moscow Division of the Central Boiler Turbine Institute made a report 'On the mechanism of influence of mass-exchange on heat-exchange during boiling', which analysed the influence of the developing gas phase on heat exchange during evaporation. Dr.Tech.Sci. L.D. Berman of the All-Union Thermo-Technical Institute delivered a report on the interrelationship between thermal and mass exchange during evaporation of a liquid and condensation of the steam in the presence of permanent gases. Corresponding Member of the Acad.Sci. of the U.S.S.R., G.N. Kruzhilin, discussed Tolubinskiy's report. Dr.Tech.Sci., V.G. Fastovskiy of the All-Union Electro-Technical Institute, gave information about experimental data obtained during boiling of a number of organic liquids and mixtures of them with water. Dr.Tech.Sci., B.S. Petukhov, Moscow Power Institute, pointed out the need for profound study of the mechanism of boiling of liquids. Cand.Tech.Sci., D.A. Labuntsov, Moscow Power Institute, expressed a similar opinion. The session on heat exchange during boiling in the region of moderate thermal loading heard 7 reports. Dr.Tech.Sci., V.D. Popov, (KTIPP) made a report on 'Heat transfer during boiling of crystallising solutions', Cand.Tech.Sci., V.G. Garyazha (KTIPP) presented the results of an experimental investigation of heat

Card 2/7

Session on heat exchange during change of aggregate state of matter. 96-3-23/26

transfer during the boiling of masecuite. Dr.Tech.Sci., I.I. Chernobyl'skiy (Institute of Thermal Engineering of the Acad.Sci. Ukrainian SSR, Engineer S.A. Balitskiy (same Institute) and Engineer F.P. Minchenko of the Central Boiler Turbine Institute reported the results of an experimental investigation of heat transfer during boiling of aqueous solutions of lithium bromide and chloride under vacuum. Cand.Tech.Sci. I.E. Veneraki, of the Kiev Polytechnical Institute, reported the results of investigations on heat transfer of a horizontal bundle of tubes to boiling water and sugar solution under conditions of free convection and vacuum. Cand.Tech.Sci. R.Ya. Ladiyev of the Kiev Polytechnical Institute reported on 'The use of approximate thermo-dynamic similarity to establish heat transfer relationships during boiling. Dr.Tech.Sci. I.I. Chernobyl'skiy of the Thermal Engineering Institute of the Acad.Sci. of the Ukrainian SSR and Cand.Tech.Sci. G.V. Patiani of the Power Institute of the Acad.Sci. Georgian SSR reported the results of investigations on the heat transfer co-efficient when boiling Freon 12 in large volume on horizontal tubes. Contributions to the discussion were made by Cand.Tech.Sci. V.Ya. Gol'tsov (M.I.Kh.M), V.D. Popov of KTIIPP, Cand.Tech.Sci. V.M. Borishanskiy of the Central Boiler Turbine Institute, Cand.Tech.Sci. N.Yu. Tobilevich (TsINS). The session on heat

Card 3/7

Session on heat exchange during change of aggregate state of matter. 96-3-23/26

exchange during boiling in the region of high thermal loadings heard 13 reports. Engineer V.G. Chakrygin, and Cand.Tech.Sci. V.A. Lokshin of the All-Union Thermo-Technical Institute, reported on the results of experimental investigation of the influence of non-uniformity of heat exchange round the perimeter of a horizontal steam raising tube. Cand.Tech.Sci. V.M. Borishanskiy (Central Boiler Turbine Institute) reported the results of experiments on heat transfer to boiling water at super-high and near critical pressures. Cand.Tech.Sci. E.I. Aref'eva and Cand.Tech.Sci. I.T. Alad'ev of the Power Institute of the Acad.Sci. of the U.S.S.R. reported on the influence of wetting on heat exchange during boiling. Cand.Tech.Sci. Z.L. Miropol'skiy and Cand.Tech.Sci. M.E. Shitsman of the Power Institute of the Acad.Sci. of the U.S.S.R., gave the results of experiments on heat transfer and permissible specific thermal loading in the steam raising tubes of boilers. Cand.Tech.Sci. N.V. Tarasova of the All-Union Thermal Technical Institute, gave the results of investigation on critical thermal loadings and heat transfer from the walls of tubes to water, and steam-water mixture. Cand.Tech.Sci. I.T. Alad'ev, Engineer, L.D. Dodonov and V.S. Udalov of the Power Institute of the Acad.Sci. of the U.S.S.R. gave a report on 'Heat Transfer and Critical Thermal Fluxes during boiling of under heated water in Tubes'. Cand.Tech.Sci. E.K. Averin of the Power Institute

Card 4/7

on
Session/heat exchange during change of aggregate state of matter.

96-3-23/26

of the Acad.Sci. of the U.S.S.R., reported on Heat exchange during boiling under conditions of forced circulation of water'. Engineer G.G. Treshchev of the All-Union Thermo-Technical Institute, reported on 'Experimental investigation of the mechanism of the heat exchange during surface boiling'. Dr.Tech.Sci. S.S. Kutateladze and Cand.Tech.Sci. V.N. Moskvicheva of the Central Boiler Turbine Institute, considered the relationship between the hydro-dynamics of a two-phase layer with the theory of crises in the mechanism of boiling. Cand.Tech.Sci. L.S. Sterman, Engineers V.V. Morozov and S.A. Kovaliev of the Moscow Division of the Central Boiler Turbine Institute, reported on 'A study of heat exchange during boiling of liquids in tubes at various pressures up to 85 atms'. Cand.Tech.Sci. E.A. Kazakova (GIAP) reported on questions of heat exchange during the critical point under conditions of natural convection. The following took part in the discussion:- Dr.Phys.Math.Sci. A.A. Gukhman, Dr.Tech.Sci. B.S. Petukhov, Corresponding Member of the Acad.Tech.Sci. Ukrainian SSR, V.I. Tolubinskiy, Cand.Tech.Sci. A.P. Ornatskiy, Dr.Tech.Sci. V.G. Fastovskiy and Cand.Tech.Sci. M.I. Korneyev. The section on heat exchange during condensation and evaporation heard 7 reports. Dr.Tech.Sci. L.D. Berman of the All-Union Thermo-Technical Institute reported on 'Heat and Mass exchange during condensation of steam from a moving steam-air mixture on horizontal tubes'. Cand.Tech.Sci. N.V. Zozuli of the Institute of Thermal Engineering

Card 5/7

Session on heat exchange during change of aggregate state of matter. 90-3-23/26

of the Acad.Sci. Ukrainian SSR considered the study of the process of heat exchange and the hydro-dynamics of flow of a film of condensate. Cand.Tech.Sci. O.A. Kremnev, of the Institute of Thermal Engineering of the Acad.Sci. Ukrainian SSR gave the results of an experimental investigation of heat and mass exchange in models of air, and water coolers used in deep mines. Cand.Tech.Sci. K.I. Reznikovich reported on a theoretical solution of the problem of calculating the parameters of a cooled steam gas mixture. Engineer A.L. Satanovskiy reported on 'Heat exchange during air-water evaporative cooling of equipment'. Engineer L.I. Gel'man of the Central Boiler Turbine Institute reported about investigations on heat transfer during condensation of mercury vapour on a steel wall. Dotsent V.F. Yanchenko of the Ural Polytechnical Institute, Cand.Tech.Sci. O.A. Kremnev, Dr.Tech.Sci. L.D. Berman and V.A. Smirnov of the Power Institute Acad.Sci. Ukrainian SSR contributed to the discussion. The session noted the need for further development of investigations of combined processes of heat and mass exchange; further development of study of heat exchange during change of aggregate conditions of promising new working substances; a profound study of the relationships and mechanism of the process of heat exchange and the production of data for practical calculations, and recommendations for the design of new power plant. The session directed the

Card 6/7

attention of the Acad.Sci. U.S.S.R. and Gosplan U.S.S.R. to the need
for rapid study of the physical properties of new working
substances. It was decided to call a session devoted to convective
heat exchange in uniform media in Leningrad, in 1959.

PURPOSE: This collection of articles is intended for scientific workers and technical personnel in the fields of heat transfer and hydrodynamics.

COVERAGE: This collection of 18 articles deals with experimental and theoretical studies of problems in heat transfer and hydrodynamics as they affect steam and gas turbines and heat transfer devices. The results of theoretical investigations of heat transfer in turbine components and in elements of heat utilizing apparatus are described, and new calculation methods are suggested. Correct problems of the thermodynamics and aerodynamics of steam and gas turbines are discussed. References follow each article.

4Zh131 (Bul. Inst. petrol, gaze si geol.', v. 6, 1960,
247 - 260)

TEXT: The reactions were studied, which are involved in methylating toluene (I) by reaction with n-C₅H₁₁Na, iso-C₅H₁₁Na, n-C₄H₉Na and tert-C₄H₉Na (obtained from the corresponding fluorides or bromides), and also of its (I) alkylation with the complex compound n-C₅H₁₁Na·TiCl₄. In the first case, the side chain is alkylated, in the second the ring. Polyalkylation products are also formed, but no dibenzyl. The mechanism of the reactions is investigated. AUTHOR: Balk, M.B. SOV/42-13-6-5/33

TITLE: On a Theorem of Liouville Type. (Ob odnoy teoreme tipa Liuvillya)

PERIODICAL: Uspekhi matematicheskikh nauk, 1958, Vol 13, Nr 6, pp 65-71 (USSR)

ABSTRACT: Principal result: Let $\Phi(z)$ be a unique analytic function, let $P(x,y)$ be a real polynomial of degree s , $P(x,y) \neq 0$, D_+ (resp. D_-) be the set of all points of the plane in which $\Phi(z)$ is regular and $P(x,y) > 0$ (resp. $P(x,y) < 0$). If on one of the sets D_+ or D_- $\operatorname{Im} \Phi(z)$ is bounded from above and on the other one it is bounded from below, then every isolated singularity of the function $\Phi(z)$ is a pole of at most s -th order and lies on the curve $P(x,y) = 0$. Several conclusions are formulated. There are 2 Soviet references.

Balk, Mark Benevich

Geometricheskiye prilozheniya ponyatiya o tsentre tyazhesti (Geometrical Application of the Concept on the Center of Gravity) Moscow, Fizmatgiz, 1959. 230 p. (Series: Biblioteka matematicheskogo kruzhka, no. 9)
25,000 copies printed.

Ed.: A. F. Lapko; Tech. Ed.: V. N. Kryuchkova.

PURPOSE: This book is intended primarily for advanced students of mathematics and physics. The book can also be used by secondary school teachers and directors of student mathematics associations.

COVERAGE: This book discusses the application of a concept in mechanics, the center of gravity, to mathematics and chemistry (problems on compounds and fusion). Each problem considered is prefaced by the necessary theoretical facts. The material contained in the book was originally used by the student mathematical association and the seminar on elementary mathematics at the Smolensk Pedagogical Institute. The author thanks A. F. Lapko for editing the book, and for suggesting his versions of two solutions (Sec. 2, problems 6 and 7, "Another Solution"). The Appendix contains short biographical sketches of the

Moscow, Gosizdatmat, 1959, 15,000 copies printed.

A.I. Aronashvili, Editorial Board of Series, I.M. Bronshteyn,

Purpose: This book is intended for persons without an extensive mathematical education who are interested in trends in contemporary mathematics. The book may be useful to high school mathematics teachers.

Coverage: The book consists of articles, reviews, and scientific and methodological reports, some of which are translations from other languages. The state of modern mathematics is covered, including applications, history, teaching of mathematics in schools, and mathematical developments in the USSR and abroad. One section deals with scientific and pedagogical life in the USSR, and another contains reviews of certain mathematical publications. Some mathematical background is necessary to understand the book; certain articles require a knowledge of higher mathematics.

CLASS I BOOK REGISTRATION

B-7/252

Mathematics for Engineers. Selected Chapters from the Textbook Series, Collection of Mathematical Books, No. 1, 1958. 3,000 copies printed.

By: G. A. Kriegsmann. (Editor). T. G. Kuz'min, et al.

This book is divided into six chapters. It contains 110 problems, 100 exercises, and 100 tables. It may also be used by students in higher technical schools, and engineers in their professional work. The book contains 13 research articles presented at the Conference on the Theory of Functions of a Complex Variable held in Moscow in the autumn of 1957. The Conference was organized by the Institute of Mathematics and its Applications and the Institute of Mathematics and its Applications of the Academy of Sciences of the USSR. The Conference was divided into 7 parts. The first part concerned the theory of functions of one complex variable, boundary and extremal problems, functions and functionals and applications. The second part concerned functions of many variables, functions of several variables and boundary problems. The third part concerned functions and the theory of functions of several variables and the theory of functions of a complex variable. The fourth part concerned analytic functions and the theory of functions of a complex variable. The fifth part concerned the theory of functions of a complex variable and its applications. The sixth part concerned the theory of functions of a complex variable and its applications. The seventh part concerned the theory of functions of a complex variable and its applications. The eighth part concerned the theory of functions of a complex variable and its applications. The ninth part concerned the theory of functions of a complex variable and its applications. The tenth part concerned the theory of functions of a complex variable and its applications. The eleventh part concerned the theory of functions of a complex variable and its applications. The twelfth part concerned the theory of functions of a complex variable and its applications. The thirteenth part concerned the theory of functions of a complex variable and its applications.

ACCESSION NR: AP4038578

S/0022/64/017/002/0009/0015

AUTHOR: Balk, M. B.

TITLE: Degenerate bianalytic mappings

SOURCE: AN ArmSSR. Izv. Seriya fiziko-matematicheskikh nauk, v. 17, no. 2, 1964, 9-15

TOPIC TAGS: bianalytic mapping; degenerate mapping, complex variable, analytic function, logarithmic spiral

ABSTRACT: The author studies the function

$$w = B(z) = \varphi(z) + \bar{z}\psi(z), \quad (1)$$

which is bianalytic in a simply-connected region D of the plane of the complex variable $z = x + iy$, where $\bar{z} = x - iy$, and $\varphi(z)$ and $\psi(z)$ are single-valued analytic functions in D. The mapping produced by the function

$$w = f(z) = u(x, y) + iv(x, y) \quad (2)$$

Cord 1/2

ACCESSION NR: AP4038578

is called degenerate if it maps some region D into a set without interior points (for example, a point, or a simple arc). Theorem: In order that a mapping, effected by a biaanalytic function $W = B(z)$, be degenerate in a certain (simply-connected) region D, it is necessary and sufficient that $B(z)$ can be represented in one of the following forms:

$$w = A(c^{\alpha}z + \bar{z}) + B; \quad (3)$$

$$w = A(z + c)^{\gamma}(z + \bar{c}) + B \quad (4)$$

(A, B, c, α, γ are constants, $\operatorname{Im} \alpha = 0, |\gamma| = 1$). The map of the region D may only be one of the following figures (or part of it): point, straight line, circumference, or logarithmic spiral. Orig. art. has: 30 formulas.

Balk, Mark Benovich

Elements of space flight dynamics (Elementy dinamiki kosmicheskogo poleta)
Moscow, Izd-vo "Nauka," 1965. 339 p. illus., biblio., index. 4450 copies
printed. Series note: Mekhanika kosmicheskogo poleta

TOPIC TAGS: astronautics, spacecraft motion, spacecraft trajectory, three body
problem

PURPOSE AND COVERAGE: The book presents the elements of the dynamics of
space flight and trajectory problems in astronautics which are closely related
to classical celestial mechanics. It is intended for all those who wish to be-
come acquainted with the celestial-mechanical apparatus of astronautics, with
the simplest problems of astrodynamics, and the methods for their solution.
It will be useful to those, who intend to study the highly scientific literature
on this subject.

TABLE OF CONTENTS: [abridged]

Foreword -- 7

Introduction -- 11

Card 1/2

UDC: 629.19:521.1

Acc NR: AM6008540

- Ch. I. Fundamentals of the theory of Newton's potential -- 19
- Ch. II. Two-body problem -- 40
- Ch. III. Duration of the flight of a satellite between two points of its orbit -- 102
- Ch. IV. Trajectory of the satellite in three-dimensional space -- 131
- Ch. V. The n-body problem -- 166
- Ch. VI. Application of the sphere of influence concept to the approximate computation of the trajectory of a small body -- 201
- Ch. VII. Restricted three-body problem -- 228
- Ch. VIII. Deviation of the satellite's motion from Kepler's trajectory -- 228

Answers, instructions, and solutions -- 300

Appendix. Some astronomical constants -- 329

Bibliography -- 331

Subject index -- 336

SUB CODE: 22,03 / SUBM DATE: 09Nov65 / ORIG REF: 058 / OTH REF: 016
